

Mikayla Grady  
CS-470: Full Stack Development II  
18 December 2022

#### Experiences and Strengths:

Throughout this course, I have learned several skills that will help me in my career field. I have learned a lot about troubleshooting and adapting to make things work. I have also learned about various AWS which are widely used. Some of the strengths I have are troubleshooting, adapting, and learning to research to find answers. Some possible roles are a developer or QA Engineer.

#### Planning for Growth:

It is extremely important to be able to handle scaling. One thing to consider with this is the cost. In order to predict that you would want to look at trends you can see with the current configurations. It is also important to note that sometimes, you will have the option to pay as you go or pay for what you use. You will also want to decide if you will go with containers or serverless. Using containers would be more expensive because often times those are not pay as you go like other options.
